

Final project: Proposal

EDH7916 | Summer (C) 2020

Benjamin Skinner

From the syllabus:

For your final project, you must produce a 3-5 page report on a higher education topic of interest. The report should be a combination of writing, tables, and figures, have minimal citations (if any), and be fully reproducible with minimal effort. You must use data that is either publicly available or that can be shared with others (no IRB restrictions). Everyone will submit three preliminary assignments in

addition to the final report.

This assignment represents the first of those three preliminary assignments.

For your final project proposal, I need the following in a cleanly formatted Markdown (.md) file:

1. A paragraph describing your project:
 - What will you be predicting?
 - Why is it interesting?
2. A description of where you will find this data.
3. A few lines describing your dependent variable in detail. What is the nature of this outcome as a variable?

Submission details

- Upload to our CANVAS course site no later than 11:59 p.m. EDT on the due date
- Save your file as <name>_proposal.md where your last name replaces <name> (e.g. skinner_proposal.md)
